Speakline

A speaking trainer for people with an important conversation ahead

Daulet — Product · Asylbek — Payments · Altair — Finance

7 November 2026

1 · Problem

“My interview is on Thursday, and I freeze when I talk”

33.7%

of US adults are afraid or very afraid of public speaking

63.0M

hires in the US in 2025 — and each starts with interviews

Episodes

the need peaks before the date and drops after it

The pain is real and frequent. The risk is retention, not demand.

Chapman Survey of American Fears 2025, n = 1,015 · BLS JOLTS · our pain-validation research, 28 Oct 2026

2 · Opportunity

People already pay for this pain

Company	Money	Context	Source
Vocal Image	$12M ARR	~50k payers, 20 people, $3.6M seed	TechCrunch, Aug 2025
Wellspoken	$12k → $16k → ~$40k / mo	Jan → Feb → Mar 2026, ~$10k self-funded, profitable	Founder, Richmond BizSense
Yoodli	$40M Series B	valuation over $300M, mostly enterprise	TechCrunch, Dec 2025
Speak	>$100M annualised	language learning — adjacent, not direct	Forbes via Benzinga
Orai	$2.3M raised, last 2019	generic “practise speaking” app stalled	Caplight

Not public: competitors’ ad spend (Meta shows spend only for political ads). PatterAI’s revenue exists only as a third-party estimate that contradicts its 177 live ads, so we leave it out.

North American public-speaking training market: $2.6–2.9B (Dataintelo / MarketIntelo)

What the leaders keep running

Brand	Active ads	Longest-running hooks	Running	Format → destination
Vocal Image	462	“How rare is your voice type? Take the test”	since 13 May	video 12s → web quiz
		“One Tap to Confidence · 50% see results in week 1”	since 19 Mar	image → web quiz
		“Your brain freezes when people are watching”	since 29 Aug	skit 102s
PatterAI	177	“91% sound noticeably sharper after 3 weeks”	since 18 Apr	static DCO → App Store
		“Become a magnetic speaker” — app demo	since 26 Jun	UGC video 52s
Wellspoken	9	“Stop sounding junior in important meetings”	since 12 Aug	video 30s → App Store

Meta Ad Library, active ads, all countries, pulled 2 Nov 2026. Vocal Image: 320 of 462 shown in the US; also live in ES, DE, FR

Three patterns, and what we do with them

Pattern 1

A test is the hook

Vocal Image's 12s "voice test" ad has run since May

Our hook: 10-second voice test, result before paying

Pattern 2

Name the moment

Wellspoken: "important meetings"; VI: "brain freezes"

Our hook: the interview on Thursday

Pattern 3

Localise the funnel

VI: ?lng= web funnels, ads in ES, DE, FR

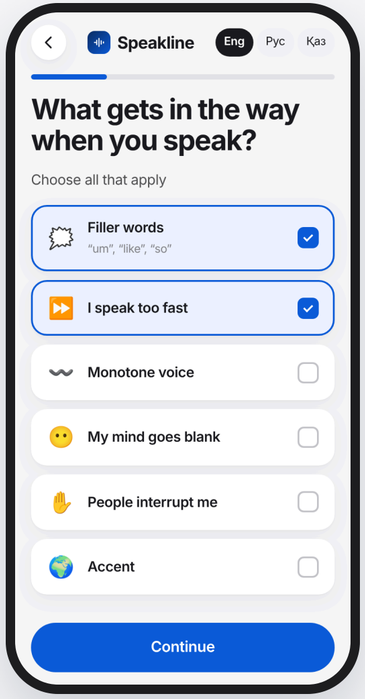

Our path: US first, then localised EU

In the model: CTR 1.5% today → 1.8% is lever 1 — a hypothesis to test, not a fact

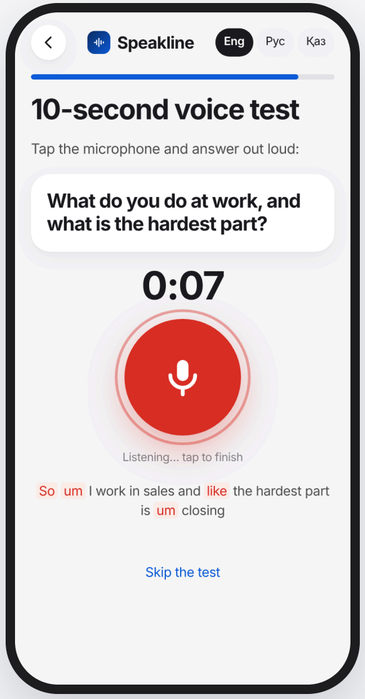

We do not copy "91%" or "50%" claims: we have no user data to back such a number yet

3 · Solution

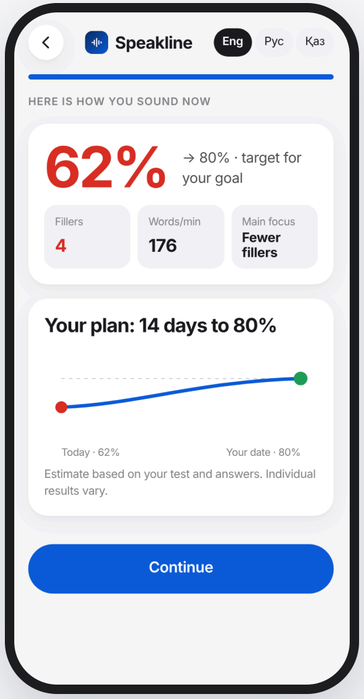

Hear how you sound in 10 seconds — before you pay

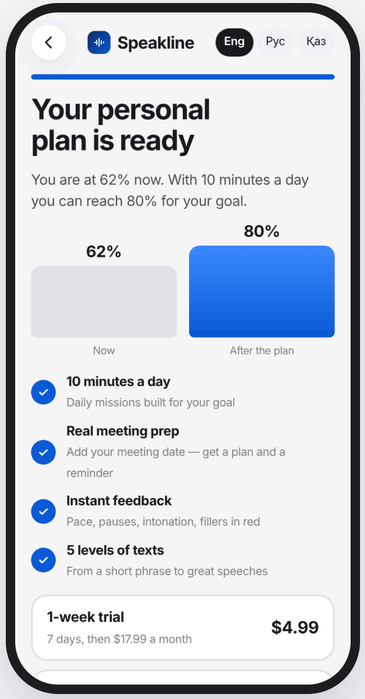

1 · Your occasion

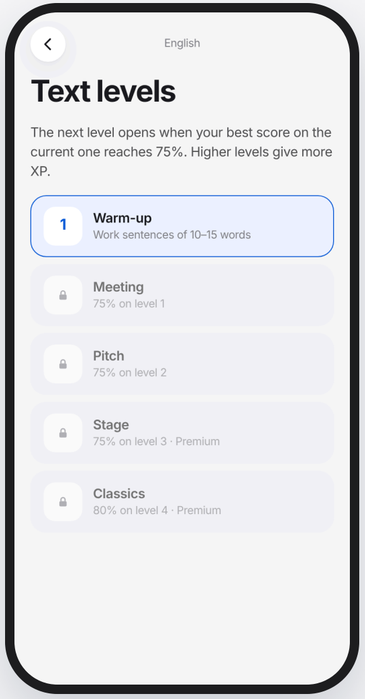

2 · Speak 10 s

3 · Feedback

4 · Plan to the date

5 · Daily drills

Working web funnel and app — try it on the Live Demo slide

Web-to-app subscription, sized to the event

Trial week

$4.99

then $17.99 a month; 45% of trials convert in the model

45% of payers

Monthly

$17.99

renews every month

30% of payers

3 months

$29.99

first payment, then $59.99 per quarter

25% of payers

Upsells

+$9.99 · +$10

Meeting-prep pack once · Pro scenarios monthly

15% · 5% take

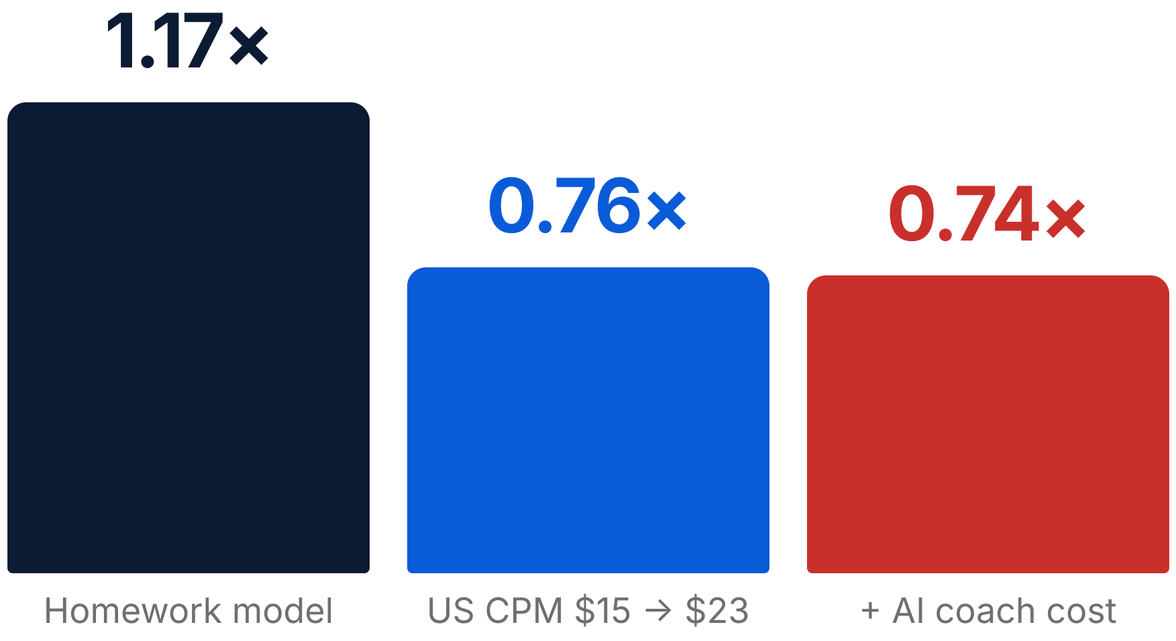

Paddle is merchant of record: it collects VAT and handles disputes — 5% + $0.50 per payment

Plan mix and conversion are assumptions from the model · Paddle pricing

5 · Numbers

Base case in the US: we do not buy traffic yet

12-month LTV / CAC

Base case, US

$62.11

CAC — to get one payer

$46.11

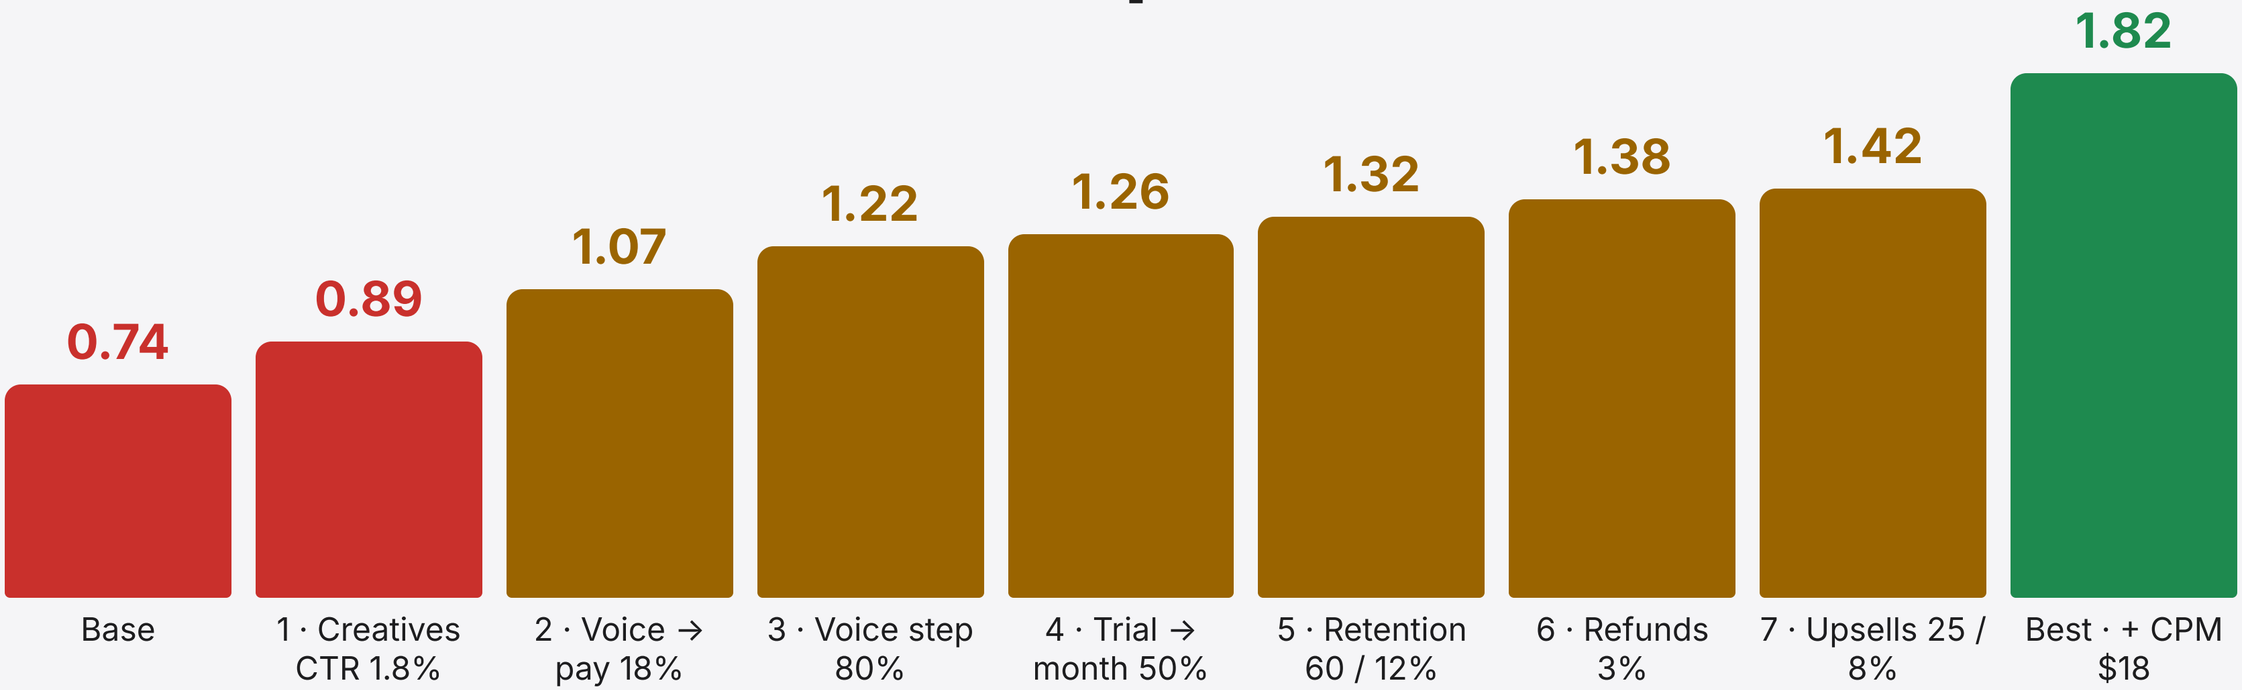

LTV — net money per payer in 12 months

0.74× · no payback in 24 months · don't buy

CPM: Adamigo, US 2026 average $23 · AI: Claude Sonnet 5.5, $2 / $10 per M tokens, 40 reviews a month = $0.34 per active user · Google Sheet

5 · Numbers · Levers

A ladder of levers: each step is one test

below 1.0 — don’t buy

1.0–1.5 — test

1.5 and above — scale

Cumulative: each bar adds one lever to the previous. Lever values are hypotheses; payback: step 2 = month 10, step 7 = month 5

5 · Numbers · Countries

Cheaper attention in Europe beats lower prices

Market	CPM (+ location fee)	Monthly	VAT	CAC	12m LTV	LTV/CAC	Payback
US	$23.00	$17.99	—	$62.11	$46.11	0.74	none
UK	$10.31 (+2%)	£14.99	20%	$28.40	$41.99	1.48	month 5
Germany	$10.05	€17.99	19%	$27.14	$42.40	1.56	month 4
Spain	$5.80 (+3%)	€12.99	21%	$16.13	$28.66	1.78	month 4

≤ ½

European CPM vs the US, so CAC halves or better

−8 to −38%

LTV per payer after VAT and local prices

DE, ES

need the app in German and Spanish first

CPM: Adamigo 2026 by country; location fees: Aimerce; VAT included in price; FX GBP 1.3337, EUR 1.1170 (27 Oct 2026). Same funnel conversion assumed

6 · Go-to-Market

US for recognition, then Europe in its own languages

Phase 1

US test

Test budget, not scale. Creatives with the voice-test hook; A/B voice before paywall

Gate to next step

measured LTV/CAC ≥ 1.0

Phase 2

UK

Same English product and creatives; CPM about half of the US

Gate to next step

UK ≥ 1.5 on real data

Phase 3

Germany, Spain

Localise the app and funnel first, the way Vocal Image did

Gate to next step

per-country ≥ 1.5

Money Map at full spend ($8,670 a month) in the US base case: month 6 net $4,886 vs ads $8,670 — so Phase 1 stays a test

Money Map: HW 3, updated with the Capstone base CAC

7 · Live Demo

Try it now: speak for 10 seconds

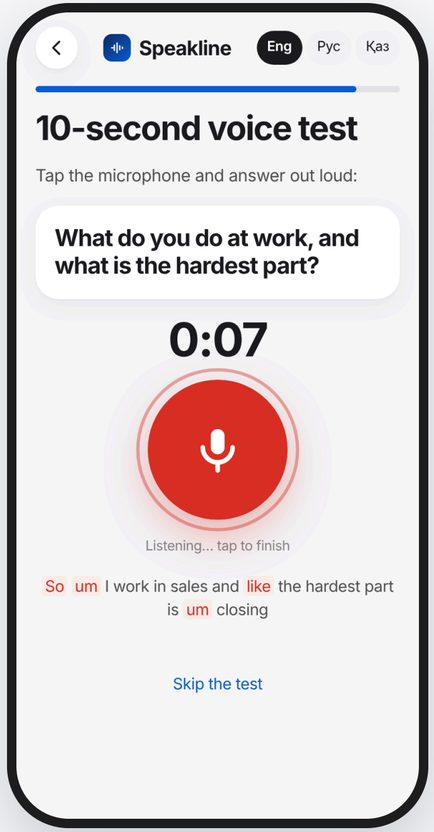

Landing → quiz

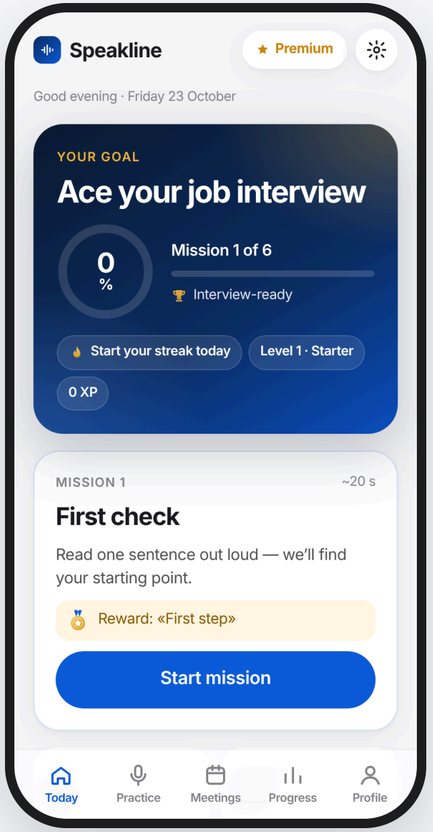

something02.github.io/Speakline/start — occasion, voice test, feedback, paywall

The app

something02.github.io/Speakline — drills, levels, AI coach, Pro

Best in Chrome: it asks for the microphone. Checkout is in test mode: no real money.

Backup: 2-minute demo video in the Capstone folder

Three tests that decide the US

Test 1

Voice-test hook vs “confidence” hook

Metric: CTR and cost per started quiz

Keep if CTR ≥ 1.8%

Test 2

Voice before paywall: on vs off

Metric: paid share of paywall views

Keep if 15% → 18%

Test 3

Voice in the Instagram in-app browser

Metric: share of phones where the mic works

Fix with server speech recognition if low

Then: German and Spanish versions of the app and funnel

Each test has one primary metric, a guardrail (refunds, CAC) and a stop rule set before launch

Materials

Everything can be opened and checked
